Atrial premature beat
Atrial paroxysmal tachycardia-onset in middle of record
Atrial flutter-2:1 and 3:1 atrial to ventricle rhythm
Atrial fibrillation
Ventricular paroxysmal tachycardia
Ventricular fibrillation
Premature ventricular contractions (PVCs)
sinus tachy
1st degree H block prolonged PR
2nd degree H block dropped beat
complete H block
sinus arrhythmia recorded cardiometer
sinoatrial nodal block
Circus movement, showing annihilation of the impulse in the short pathway and continued propagation of the impulse in the long pathway.
Development of arrhythmias in long QT syndrome (LQTS)
Initiation of fibrillation

A: Blocked impulse

B: Dividing impulses

Stimulus point
Pathways of impulses in atrial flutter and atrial fibrillation
Application of electrical current to the chest to stop ventricular fibrillation

Several thousand volts for a few milliseconds
